

## **Tzolkin Corporation announces the release of two new versions of its popular dynamic DNS client software for Windows**

Pepperell, MA, June 8, 2004 -- Tzolkin Corporation, the leading commercial dynamic DNS service provider, today announced the release of two new versions of the TZO client software for use with Microsoft Windows. These newly released versions offer more flexibility to users of the TZO dynamic DNS service.

The majority of small business and home networks are set up with Dynamic IP addresses, which means that the Internet service provider uses a pool of IP addresses for Internet connectivity. Having a dynamically assigned IP address creates a problem when hosting a server, but the TZO dynamic DNS service solves that problem. The TZO client will detect when the server's IP address changes and automatically updates the server's DNS record. This keeps the server available for visitors in spite of the fact that its IP address has changed.

"The two offerings, TZO Version 3 and TZO Lite offer more choices to our Windows users" said Gary Cook, CEO of Tzolkin Corporation. "Many IT professionals and systems administrators that use our service have expressed an interest in a small, pure dynamic DNS client, and that's what we gave them in TZO Lite." Mr. Cook also states that "TZO Version 3 offers a completely redesigned interface with exciting new features that enable us to extend additional value to our end-users."

The TZO Version 3 and TZO Lite software can be downloaded at popular Internet download websites such as <http://www.download.com> and <http://www.snapfiles.com> or at the TZO website at <http://www.tzo.com>
